TOWARD THE BEST DATA WORKOUT FOR DESTINATION MARKETING

Prof., Han Woo Park YeungNam Univ. Korea

hanpark@ynu.ac.kr

Dr. Han Woo Park was a pioneer in network science of open and big data in the early 2000s (often called *Webometrics*) when he used to work for Royal Netherlands Academy and lead the World Class University project. He has published more than 100 articles in *SSCI* Journals.

Understanding Human Behavior and the Social Environment

Extraneous factors in judicial decisions

"You are anywhere between two and six times as likely to be released if you're one of the first three prisoners considered versus the last three prisoners considered."

The authors of the peer-reviewed paper looked at more than 1,000 rulings made in 2009 by eight judges. They found that the likelihood of a favourable ruling peaked at the beginning of the day, steadily declining over time from a probability of about 65% to nearly zero, before spiking back up to about 65% after a break for a meal or snack.

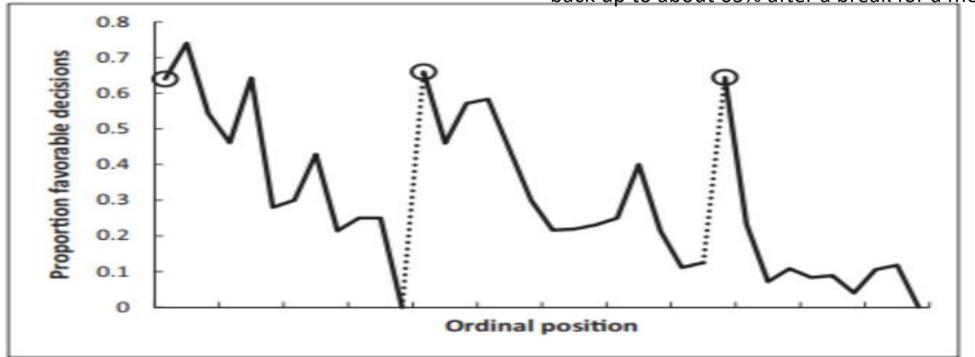

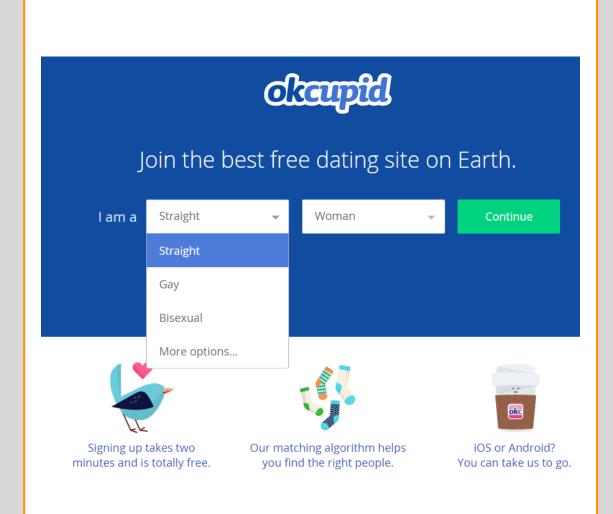

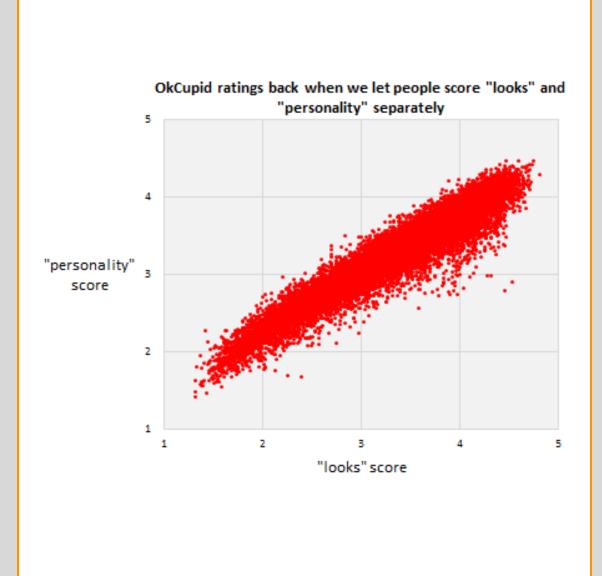

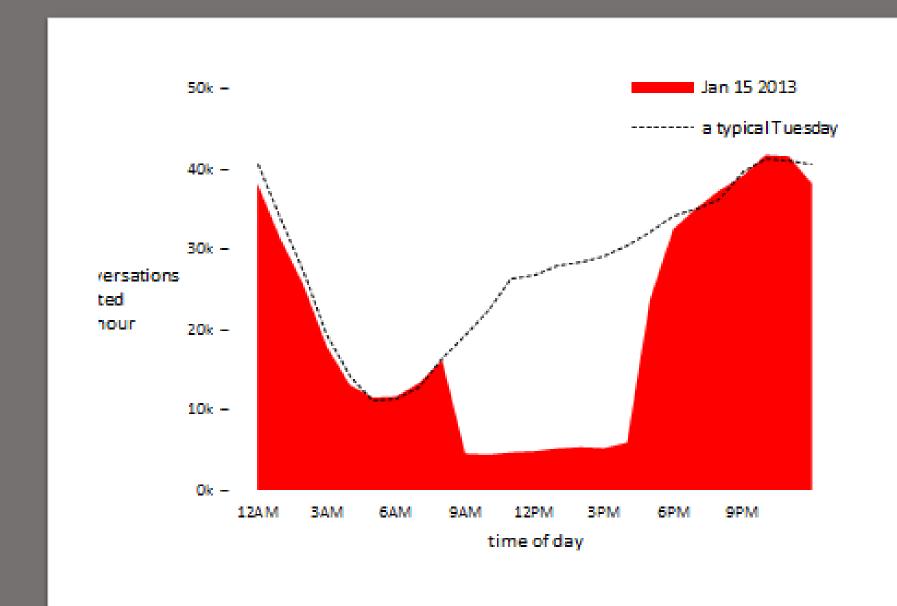

Fig. 1. Proportion of rulings in favor of the prisoners by ordinal position. Circled points indicate the first decision in each of the three decision sessions; tick marks on x axis denote every third case; dotted line denotes food break. Because unequal session lengths resulted in a low number of cases for some of the later ordinal positions, the graph is based on the first 95% of the data from each session.

Strategy for Data Workout

Different Strategy per Your Level

DM has been focused on a visitor's tourism activities and shopping behaviors

From nature tourism to cultural tourism: Japan's gastrodiplomacy as soft power http://www.gastrodiplomacy.net/gd-explanation

Related to cultural tourism, international communication theories (e.g. cultural proximity, cultural hybridism, comparative culture, etc.) should be discussed more.

DM agencies now require a transition from tourism resources to improve their use of data

about online information seeking and

life & business-related activity

in order to properly respond to the reduction of outdoor activities due to environmental factors

Data-based behavioral economics perspective is necessary

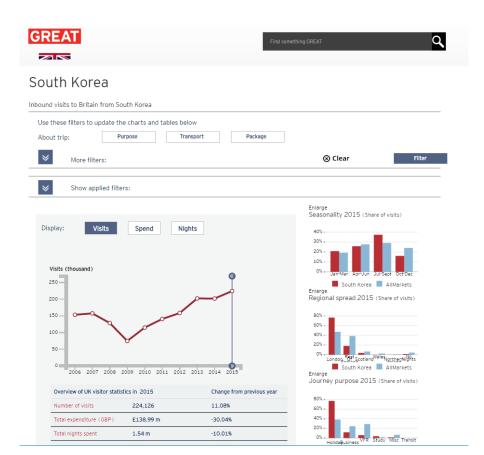

THE DESTINATION MARKETING STRATEGY IS SHIFTING

You position yourself

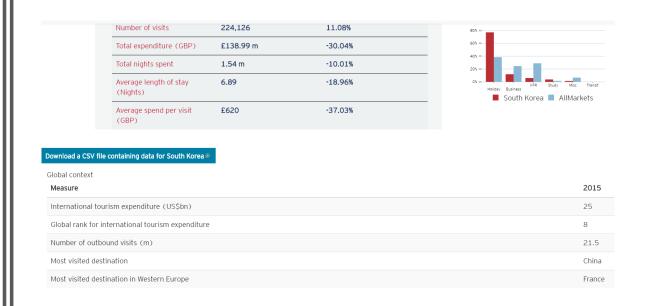

Table 1. Big data business model typology

Туре	Example functions	Dependencies
Data users	Using data to inform strategic decisions; building data into products	Depend on suppliers for raw data, and on facilitators for infrastructure and skills
Data suppliers	Gathering primary data; aggregating and packaging data for sale	Depend on <i>facilitators</i> for infrastructure and skills, and on <i>users</i> both as customers and as sources of data
Data facilitators	Supplying infrastructure; consultancy; outsourced analysis	Depend on users and on suppliers as customers

Know Your Customer using Big Data

Internet-based Discovery Ads

Culturing new atmosphere for Googlers

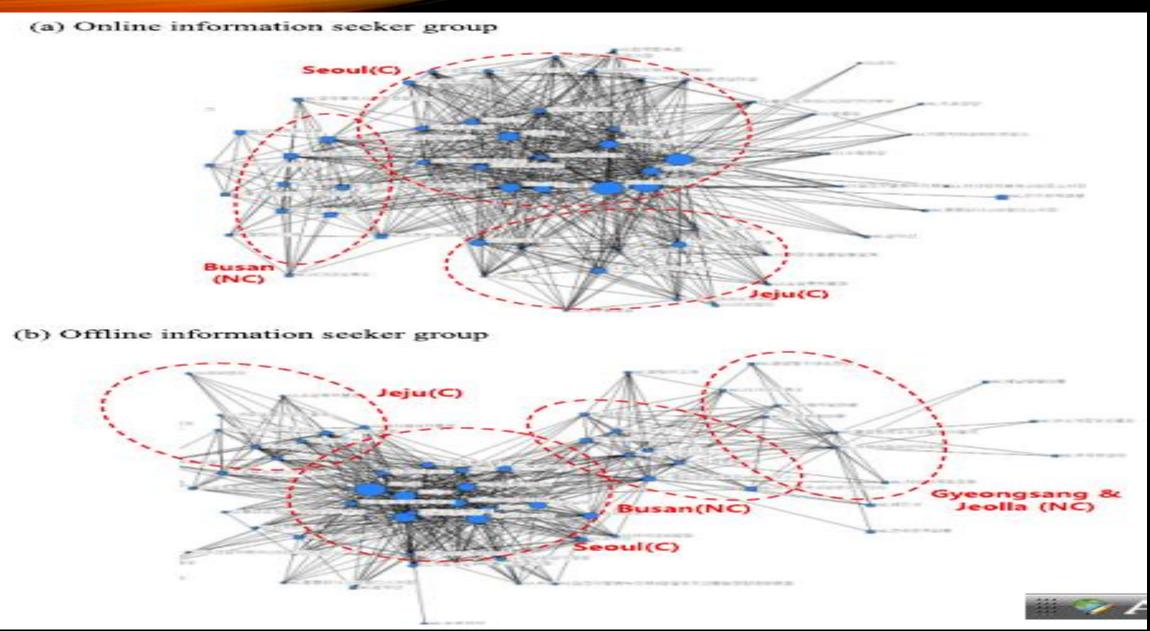

Discovery Tourism

 Visitors are very interested in coming across new place without active effort

Gallery Tourism

 Visitors find things to explore when making a query

I coined this typology based on the following piece "Google launches two new types of ads: intentbased Discovery ads and query-based Gallery ads"

Do online information sources really make tourists visit more diverse places?: Based on the social networking analysis,

Journal of Travel & Tourism Marketing

ISSN: 1054-8408 (Print) 1540-7306 (Online) Journal homepage: http://www.tandfonline.com/loi/wttm20

From online via offline to online: how online visibility of tourism information shapes and is shaped by offline visits

Mi Kyung Lee, Ho Young Yoon & Han Woo Park

Online Info Search

Offline Visit

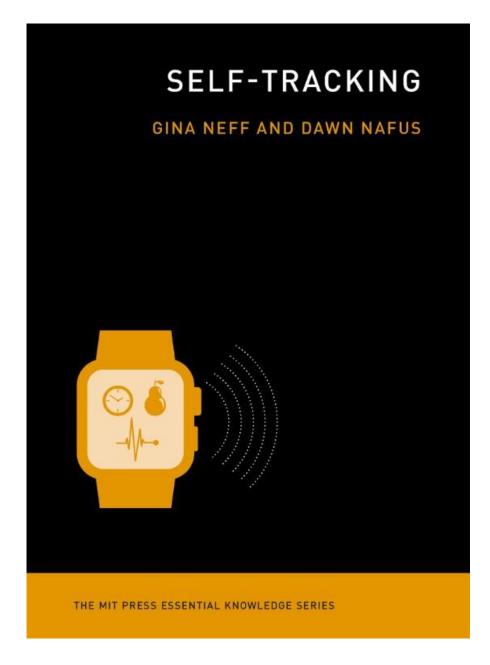

Post-visit Activity

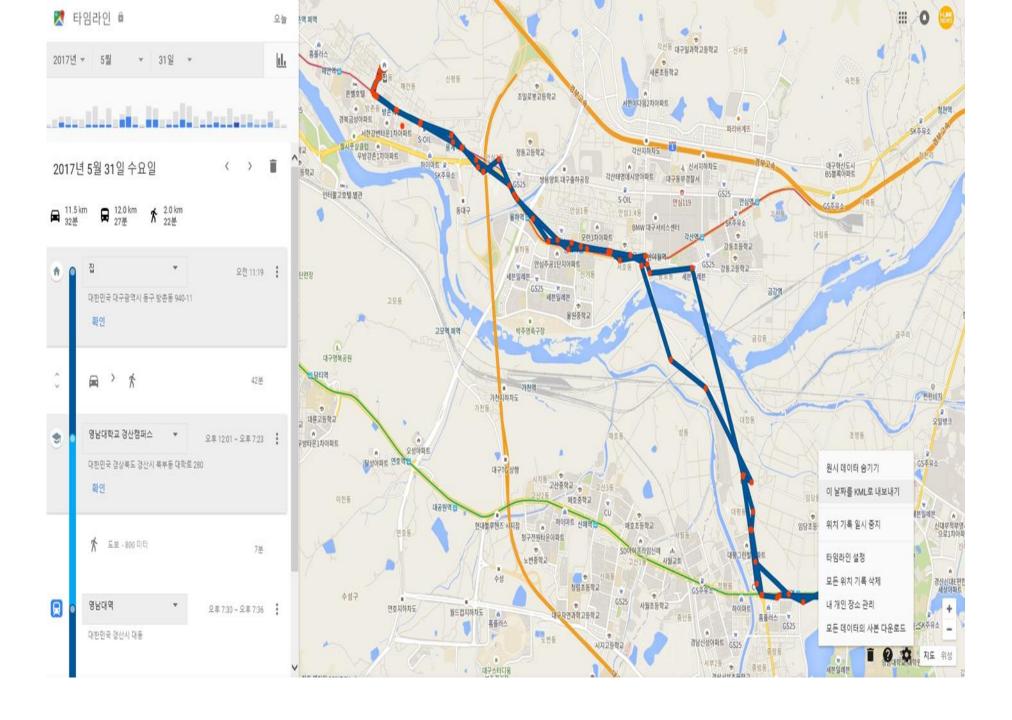

- In addition, tourism, which combines online and offline, is a new concept. The motivation of
 offline tourists is influenced by the search and use of online media.
- Of course, online and offline channels have reciprocal effects. In this process, cultural factors are the intermediary factor.
- Therefore, it is necessary to discuss it in the context of search engines and social media cultural tourism.

Self-Tracking

What happens when people turn their everyday experience into data: an introduction to the essential ideas and key challenges of self-tracking.

From Mobilization To Micro-Action

FIT(Free Independent Tour)

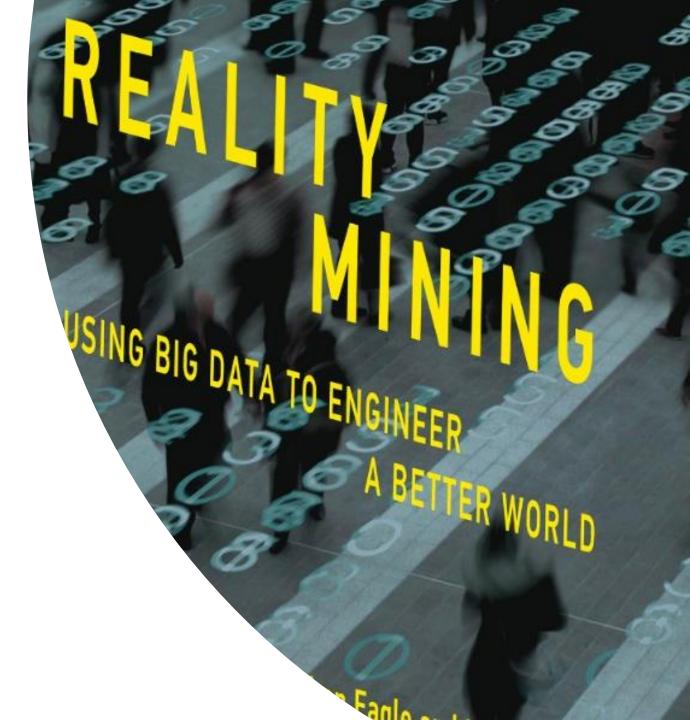

• We often make the mistake of thinking of people who travel freely as isolated beings. However, they (i.e. Z-generation) can communicate freely and easily with others through smartphones.

DWO(Do it With Others)

• FIT develops into DWO, a personal free cooperative tourism project. It is evolving into a third-generation tour where people with similar tastes and purposes temporarily form a group and enjoy meetings and trips with low cost and high efficiency.

Reality Mining

 Co-written by Nathan Eagle, voted one of "50 people who will change the world" by Wired, and Kate Green, an essayist, journalist, poet, and former laser physicist, Reality Mining looks at how Big Data can be put to positive use, from helping users break bad habits to tracking the global spread of disease

Smart Tourism Based on Internet of Things

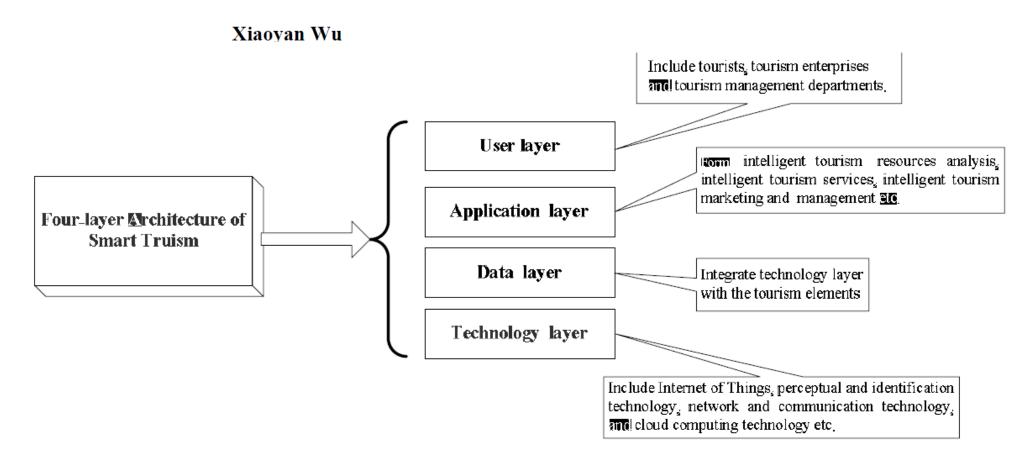

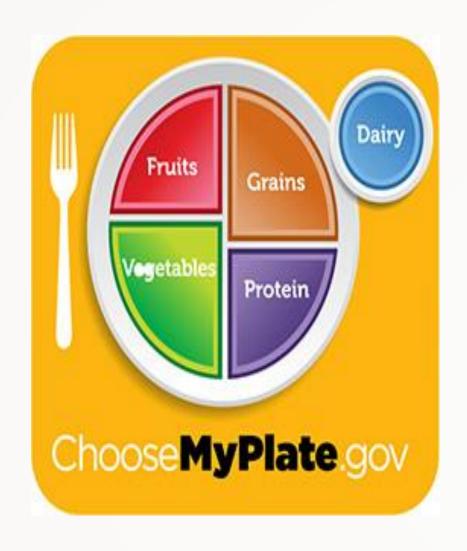

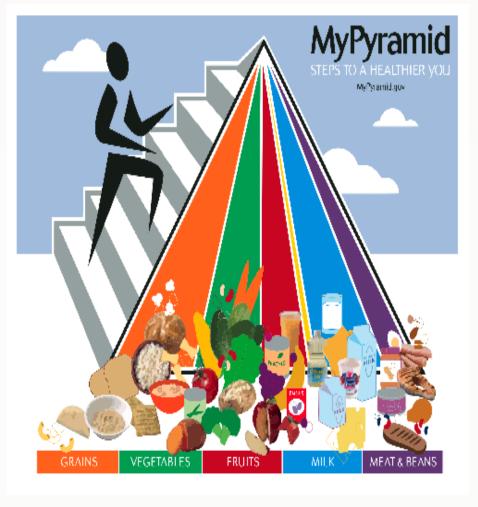

Figure 2. Four-layer architecture of Smart Truism

Insufficient sparks to trigger related activity

- Prepare data UI/UX based on target audience
- Since visitors' tourism activities are still affected by popular places among residents, it is important to plan tourism content that they want to promote to outsiders based on the analysis of insiders' interests.
- Culturing atmosphere for spontaneous data workout
- Tourism communication leadership is crucial in developing an atmosphere for user-generating data activities and the government's role that may facilitate data-driven innovation.
